data

- 1000 initial psychiatric evaluation records
 - with surrogate personal health information (PHI)
- from CEGS N-GRID & Partners Healthcare
- mental health records
 - **1st set ever released to the research community!**

data: example

Subject: Patient Initial Visit Note -Identifying Information Date of Service:

09/14/2067CPT Code: 90792: With medical services
Age:

43Sex: Female
Interpreter Used: None needed
Chief Complaint / HPI Chief Complaint (Patients own words)

Valentina is a 43-year old female with a past psychiatric history significant for an underlying depressive disorder, anxiety disorder, binge eating disorder, no history of prior inpatient psychiatric hospitalizations, no history of prior suicide attempts, no known history of self-injurious behavior, no history of EtOH or illicit-substance use and a past medical history significant for DVT (8-years ago while on OCP) who presents to the EDCRP for continued psychopharmacologic care following her transfer from Dr. Yvonne Ellison's practice. Per Valentina, "I just need to continue these medications...they have been so helpful."

History of Present Illness and Precipitating Events

Valentina describes that she first presented for binge-eating disorder treatment approximately one-year prior to current presentation, when she notes that she was bingeing on a daily basis in the context of a number of stressors/transitions, including the birth of her two children within a year of each other, marriage to her college boyfriend at the age of 39, and ensuing conflicts with her mother as a result of the marriage. She notes that at that time, she binged daily, which steadily led to a marked increase in a 30-pound weight gain within 4-months. She states that she would binge in secret from her husband and two daughters and states that following each binge she felt "awful...ashamed." As a result, she states that her mood started to precipitously decline and states that she ultimately realized that she "could no longer fun from this...I had to seek treatment."

In an effort to seek treatment, she began seeing dietician, Frida Gibbons in Hubert, who she states was "helpful, but not enough." She subsequently purchased a diet book and worked through the exercises in the book and states that that, too, was helpful, but not enough. She ultimately contacted one of the authors of the book and arranged to undergo therapywithher via Skype. She states that that was helpful for approximately 6-months, at which time her therapist suggested that she seek local ED-specific care. As such, she underwent an evaluation with Dr. Deon Yarbrough 6/2066 and was subsequently referred to Dr. Tonya Alston for a 20-week course of CBT-E. Valentina states that her treatment with Dr. Alston was "phenomenal...it was exactly what I needed." She concurrently began seeing Dr. Yvonne Ellison for psychopharmacologic treatment of her underlying depressive/anxiety disorder and BED. She has since responded well to her current regimen of Zoloft, Vyvanse, and Topamax.

On further psychiatric review of symptoms, Valentina denies any curer nt feelings of depression and further denies all neurovegetative symptoms of depression. She denies any symptoms consistent with mania or psychosis. She denies any symptoms consistent with generalized anxiety and further denies any associated symptoms of panic. She further denies any history of EtOH or illicit-substance use.

Suicidal Behavior Hx of Suicidal Behavior: No
Hx of Non Suicidal Self Injurious Behavior: No
Violent Behavior Hx of Violent Behavior: No
-Psychiatric History Hx of Inpatient Treatment: No
Hx of Outpatient Treatment: Yes

-currently in psychodynamic therapist with Thelma Benson (Hubert), previously did course of CBT-E and booster sessions with Dr. Alston

-prior dx: ADHD , depression, binge-eating Disorder

Prior medication trials (including efficacy, reasons discontinued):

Ritalin (it made me anxious), and Celexa (no side-effects)Current
Therapist Name(s) and Phone #(s):

Thelma Benson Other Agency Involvement: No
Psychiatric Review of Systems DEPRESSION: Has the patient had periods of time lasting two weeks or longer in which, most of the day on most days, they felt little interest or pleasure in doing things, or they had to push themselves to do things: Yes
DEPRESSION: Has the patient had periods of time lasting two weeks or longer in which, most of the day on most days, they felt sad, down, or depressed: Yes
BIPOLAR: Has patient ever had a period of time when he/she felt "up" or "high" without the use of substances: No
BIPOLAR: Has patient ever had periods of being persistently irritable for several days, or had verbal/physical fights that seemed clearly out of character: No
PSYCHOSIS: Has the patient had unusual experiences that are hard to explain: No
PSYCHOSIS: Does the patient often have thoughts that make sense to them, but that other people say are strange: No
GAD: Has the patient had times when they worried excessively about day to day matters for most of the day, more days than not: Yes
PANIC: Has the patient had episodes of sudden intense anxiety with physical sensations such as heart palpitations, trouble breathing, or dizziness that reached a peak very quickly and presented without warning: No
ANXIETY SPECTRUM DISORDERS: Does the patient have persistent fear triggered by specific objects (phobias) or situations (social anxiety) or by thought of having a panic attack: No
OCD: Does the patient struggle with repetitive unwanted thoughts or behaviors for at least one hour per day: No

...

Psychiatric Review of Systems DEPRESSION: Has the patient had periods of time lasting two weeks or longer in which, most of the day on most days, they felt little interest or pleasure in doing things, or they had to push themselves to do things: Yes

book and states that that, too, was approximately contacted one of the authors to undergo therapy with her via Skype. It was successful for approximately 6-months.

History of Present Illness and Precipitating Events

Valentina describes that she first presented for binge-eating disorder treatment approximately one-year prior to current presentation, when she notes that she was bingeing on a daily basis in the context of a number of stressors/transitions, including the birth of her two children within a year of each other, marriage to her college boyfriend at the age of 39, and ensuing conflicts with her mother as a result of the marriage. track 1: de-identification in 2 flavors

- Track 1.A sight-unseen:
 - running existing de-id systems on the data “*as they are*”
 - how well do systems generalize to new data?
- Track 1.B regular:
 - design new systems (2 months, 60/40 training/test split)
 - advancing the state of the art in medical rec. de-identification
- Ranking/error measure:
 - Precision, Recall, F1-score*

track 2: symptom severity classification

- RDoC: framework for studying mental disorders
 - integrates many levels of information (from genomics to self-report) to understand the basic dimensions of human behavior (from normal to abnormal)
 - 5 domains: **POSITIVE VALENCE***, NEGATIVE VALENCE, COGNITIVE, SOCIAL PROCESSES, AROUSAL AND REGULATORY SYSTEMS
 - how good systems are at predicting patients' symptom severity, based on initial psychiatric evaluation records?
